Late Summer & Long Blooming PERENNIALS

Late summer signals the rich tapestry of fall colours in the forest and it brings vivid hues in both warm and cool colours in a well-planned perennial garden. Late summer and fall are often overlooked for perennial interest, but that can be remedied by adding some dependable late season performers.

Try combining the warm hues of Rudbeckia with Anemones, punctuated with the cool blues of New England Asters. Ornamental grasses are at their best in the fall as plumes of seed heads emerge to create a softer texture and late season of interest in your garden. Plan now, so your garden is at its best in all seasons.

Garden Planning Tips

While designing a perennial border, consider plant colours, bloom times, and bloom longevity. Perennials bloom at different times throughout the growing season, so to achieve a succession of blooms try using a few perennials for each growing season. Overlap long-blooming perennials to add longevity and reduce maintenance.

Map out your perennial garden and note the blooming times to figure out when seasonal colour gaps occur. Late season interest involves not only bloom time and colour, but also a celebration of decorative fruit and seedheads and foliage interest. Consider the red transformation of Bergenia foliage, or the seed heads of ornamental grasses.

Rudbeckia

Late Summer Tips

Deadheading throughout the summer will encourage repeat blooming and extend the blooming season of many perennials. Enhance the appearance of the late summer garden by cutting back and cleaning up after early bloomers, such as Peonies, Iris, and Dianthus.

Late Summer Heat: Check your perennials for heat exhaustion. High temperatures for long periods of time can dry out newly planted perennials and even well-established plantings. **Signs** of heat exhaustion are: wilted or browning leaves, limp blooms or stems.

Remedy by: thoroughly watering the base of the plant in the morning and evening; hold off on fertilizing until the plant is in stable condition. Keep a watchful eye on plantings near large trees as they will compete heavily with your perennials for any water and nutrients in the soil.

Looking for Extended Blooming Perennials?
